The Practise Ground

Class 7-10 Biology

Human Digestive System

Follow the food from mouth to anus

1

Mouth

Starch digestion starts

Salivary amylase turns starch into sugar

2

Stomach

Protein digestion starts

Hydrochloric acid kills germs; pepsin digests protein

3

Small intestine

Digestion ends; absorption

Bile emulsifies fats; villi absorb digested food

4

Large intestine

Water absorption

Absorbs water; undigested food leaves as faeces

Liver	Pancreas	Villi	Amylase	Pepsin
makes bile	**enzymes**	**finger-like**	**enzyme**	**enzyme**
fat	all foods	absorb	starch	protein

Remember

Path: mouth, oesophagus, stomach, small intestine, large intestine, anus.

Peristalsis pushes food along by muscle waves.

Quick question

Where is most food absorbed?

In the small intestine, through the villi.
